

“FLOC SYSTEMS”

Patented

The Floc System technology has commendable roots. City water systems have been using similar treatment for decades.

Finally, an automated “batch flocculation” process.

In-Home Units: Clarified water:
- Up to 900 gallons per day.

Commercial Units: Clarified water:
- Up to 30,000 gallons per day.

GREAT WATER

“Floc Systems”

For Dugout, River, or Lake Water

Automatic In-House Treatment

**From this
water ...**

Untreated Water Sample

Reduce Taste, Color & Odor;
Including suspended silts, decomposing & live algae, viruses & bacteria, cysts, solids & clay particles.

Minimal addition of flocculant

It combines with unwanted suspended matter forming floc, & separates leaving clarified water.

**... to this
water and
even better**

Our system is automated to transfer clarified water to a holding tank as it is required, & flush the “floc waste” to the septic system.

... The clarified water can now undergo further filtration & disinfection (with Ultraviolet Light) for greatly enhanced results.

Independent studies have shown:

- *Reduction in aluminum, phosphates, arsenic, & iron*
- *85% color reduction*
- *95% turbidity reduction*
- *65% dissolved organic carbon reduction*

Bring in a sample (2 litres) of your water.
We'll customize & quote on a solution for you.
